Section 1 Executive Summary .....	1-1
Section 2 Facility Description .....	2-1
Section 3 Compliance Status .....	3-1
Section 4 Remedial Actions .....	4-1
Section 5 Hatchery Contribution to Fisheries, Spawning Grounds and Hatcheries ....	5-1
Section 6 Annual Operating Expenditures .....	6-1

## List of Tables

### Table

1	Summary Program Information for Gnat Creek Hatchery - Summer Steelhead
2	Compliance with Performance Measures: Gnat Creek Hatchery - Summer Steelhead
3	Remedial Actions Required at Gnat Creek Hatchery - Summer Steelhead
4	Adult Contribution to Fisheries, Spawning Grounds and Hatcheries: Gnat Creek Hatchery - Summer Steelhead
5	Annual Operating Expenses: Gnat Creek Hatchery - Summer Steelhead

6 Annual Operating Expenses - Gnat Creek Hatchery

## Executive Summary

This report presents the findings of the independent audit of the Gnat Creek Hatchery - Summer Steelhead program. The hatchery is located along Gnat Creek, a lower Columbia River tributary approximately 17 miles east of Astoria, Oregon. The hatchery has been used for the incubation and rearing of steelhead. Due to reduction in funding, this hatchery is currently not being used for the rearing of anadromous fish.

The audit was conducted in 1996-1997 as part of a 2-year effort that will include 67 hatcheries and satellite facilities located on the Columbia and Snake River system in Idaho, Oregon, and Washington. The hatchery operating agencies include the U.S Fish and Wildlife Service, Idaho Department of Fish and Game, Oregon Department of Fish and Wildlife, and Washington Department of Fish and Wildlife.

### Background

The audit is being conducted as a requirement of the Northwest Power Planning Council (NPPC) "Strategy for Salmon" and the Columbia River Basin Fish and Wildlife Program. Under the audit, the hatcheries are evaluated against policies and related performance measures developed by the Integrated Hatchery Operations Team (IHOT). IHOT is a multi-agency group established by the NPPC to direct the development of new basinwide standards for managing and operating fish hatcheries. The Bonneville Power Administration (BPA) contracted with Montgomery Watson to act as an independent contractor for the audit.

IHOT has established five basic policies that cover: (1) hatchery coordination, (2) hatchery performance standards, (3) fish health, (4) ecological interaction, and (5) genetics. The audit focuses on all these policies, with the exception of hatchery coordination. These policies are set forth in *Policies and Procedures for Columbia Basin Anadromous Salmonid Hatcheries (IHOT 1995)*. That document is the source for the performance measures that are the basis of this audit.

## **The Audit Process**

The audit was based on the facility management's response to a 109-page questionnaire. This audit form was completed through a five-step process in which:

- Information was obtained from headquarters.
- The hatchery manager was asked to fill out and return the audit form.
- A 1-2 day site audit visit was conducted to inspect facilities, review hatchery records, discuss audit form responses, and develop remedial action plans.
- A compliance report was developed to document the compliance status of each performance measure. This report was then shared with the hatchery manager and IHOT representative.
- This hatchery evaluation report was written to document compliance with IHOT performance measures and develop cost estimates for remedial actions when needed.

## **Gnat Creek Hatchery - Summer Steelhead Results**

The Gnat Creek facility includes 15 concrete raceways, 6 starter tanks, and incubation facilities.

Gnat Creek Hatchery was constructed in 1960 as part of the Columbia River Fisheries

Development Program (Mitchell Act) - a program to enhance declining fish runs in the Columbia River Basin. Hatchery production is designed to meet harvest objectives of creating consumptive steelhead trout fisheries for the North Coast, lower Columbia River and Willamette River tributaries. Due to reduction in funding, this hatchery is currently not being used for the rearing of anadromous fish.

The Gnat Creek Hatchery - Summer Steelhead program was in general compliance with most of the performance measures. The audit found that the hatchery was not in compliance with water quality monitoring requirements, alarm requirements, double screening requirements and acclimation requirements, which are all facilities requirements. The hatchery needed to develop specific rearing standards, conduct IHOT QA/QC tests for feed preparation, develop a smoltification goal and a smoltification monitoring plan.

The specific areas in which the Gnat Creek Hatchery - Summer Steelhead program requires remedial actions based on the IHOT performance measures are listed below. These remedial actions are listed in alphabetical order without intent of ranking or otherwise assigning priority:

- Conduct IHOT QA/QC tests for feed preparation
- Construct acclimation ponds in the Clackamas, Sandy and Mollala subbasins
- Develop smoltification goal and monitor
- Develop specific rearing standards for IHOT Operations Plan
- Double screen 4 ponds
- Follow IHOT protocols for disinfection of vehicles interiors and exteriors
- Increase water supply or reduce production to meet size goal
- Install telephone pagers
- Monitor and record DO and TGP
- Run analysis for water chemistry parameters, turbidity, alkalinity, hardness, nitrite, and contaminants
- Verify compliance with rearing standards

Non-compliance issues resulting from items beyond human control or Performance Measures not relevant to this hatchery (Type 1 in Table 3, Section 4 of this report) were not listed above.

## Facility Description

**Name:** Gnat Creek Hatchery

**Stock/Species:** Winter Steelhead  
Summer Steelhead

**Operating Agency:** Oregon Department of Fish and Wildlife

**Funding Agency:** Mitchell Act (NMFS)

**Location:** The hatchery is located along Gnat Creek, a lower Columbia River tributary approximately 17 miles east of Astoria, Oregon.

**Address:** Route 2, Box 149  
Clatskanie, OR 97016

**Hatchery Manager:** Mr. Bob Mills

**Phone:** (503) 455-2234

**Fax:** (503) 455-0701

**Purpose:** Gnat Creek Hatchery was constructed in 1960 as part of the Columbia River Fisheries Development Program (Mitchell Act) - a program to enhance declining fish runs in the Columbia River Basin. Hatchery production is designed to meet harvest objectives of creating consumptive steelhead trout fisheries for the North Coast, lower Columbia River and Willamette River tributaries.

Due to reduction in funding, this hatchery is currently not being used for the rearing of anadromous fish.

**Production Goal:**

**Winter Steelhead**

Produce 446,000 smolts (90,000 lb) for release into Clackamas, Sandy, Tualatin, Gales Creek, North Fork Scapoose, Clatskanie, Lewis and Clark, and Gnat Creek river systems.

**Summer Steelhead**

Produce 210,000 smolts (42,050 lb) for release into Clackamas, Salmon, and Molalla river systems.

**Water Supply:**

Water rights total 21,643 gpm from Gnat Creek, an unnamed stream, and a well. Water flows range from a high of 15,700 gpm to a low of 1,200 gpm.

**Facilities:**

Adult Holding:	None
Incubation:	None
Early Rearing:	24 troughs
	6 starter tanks - 225 cf each
Raceways:	15 raceways - 6,400 cf each
Rearing Ponds:	None
Satellite Facilities:	None

## Compliance Status

The hatchery audits are based on compliance with written IHOT performance measures. These performance measures are documented in *Policies and Procedures for Columbia Basin Anadromous Salmonid Hatcheries* (referred to as *IHOT 1995* in this report).

The purpose of the performance measures is to implement new basinwide policies that provide regional guidelines for operating anadromous hatcheries in the Columbia Basin.

The audit focuses on performance measures for IHOT policies that cover (1) hatchery performance standards, (2) fish health, (3) ecological interaction, and (4) genetics. These performance measures are intended to guide hatchery operations once production is established. For that reason, the hatchery operations audit included broodstock collection, spawning, incubation of eggs, fish rearing and feeding, fish release, equipment maintenance and operations, and personnel training. Production priorities are beyond the scope of this audit.

Based on *IHOT 1995*, a detailed 109-page audit form was developed. The audit form divided the performance measures into six major sections along major program and technical criteria areas. Two additional sections (sections 1 and 8) include general information and expenditure information needed for this Hatchery Evaluation Report and blank forms for additional comments. The following is the basic structure of the IHOT audit form:

Section 1      Performance Measures for General Information and Expenditure  
Information (PMs General 1-2)

Integrated Hatchery Operations Team (IHOT) 1995. *Policies and Procedures for Columbia Basin Anadromous Salmonid Hatcheries*, Bonneville Power Administration, Portland, Oregon.

Section 2	Performance Measures for Program Objectives (PMs 1-4)
Section 3	Performance Measures for Facility Requirements (PMs 5-15)
Section 4	Performance Measures for Hatchery Practices (PMs 16-25)
Section 5	Performance Measures for Fish Health Policy (PMs 26-34)
Section 6	Performance Measures for Ecological Interactions (PMs 35-38)
Section 7	Performance Measures for Genetics Policy (PMs 39-43)
Section 8	Blank Forms for Additional Comments.

Several performance measures are repeated in various sections of the audit form. These performance measures overlap in *IHOT 1995* and were retained to allow individuals interested in specific portions of the audit (such as Genetics or Fish Health) to determine the compliance status of all performance measures for a given topic in one location. A repeated performance measure is indicated by shaded text.

## The Hatchery Audit Process

The hatchery audit will be conducted over a 2-year period that concludes in 1997. At each hatchery, a five-step process was used to complete the overall hatchery audit.

This process consisted of research and onsite visits. The site visit at the Gnat Creek Hatchery was conducted on March 17, 1997.

The following is the five-step audit process:

1. Information was obtained from headquarters.
2. The hatchery manager was asked to fill out and return the **Audit Form**.

3. A 1-2 day site audit visit was conducted at each hatchery. During that visit an audit team inspected facilities, reviewed hatchery records, discussed audit form responses, and developed remedial action plans when appropriate.
4. During the site visit, the compliance status of each performance measure was discussed with the hatchery manager and IHOT representative. A portion of the Hatchery Evaluation Report was sent to the hatchery manager following the audit visit as a **Compliance Report**. That Compliance Report is Table 2 of this report.
5. Information from steps 1-4 was used to prepare a draft **Hatchery Evaluation Report**. This draft report was submitted to the operating agencies for review of the information used to determine compliance. Based on review and comments, a final Hatchery Evaluation Report was developed. The final report documents the compliance of a particular hatchery with the IHOT performance measures and presents cost estimates to correct any deficiencies.

## **Compliance Status of Gnat Creek Hatchery - Summer Steelhead**

The following table includes information on life-stages that are held on this facility for some portion of their rearing cycle (Table 1). For multi-facility programs, summary cost and contribution data is presented at the facility where rearing occurs. For the compliance status relating to performance measures that do not occur at this hatchery, please refer to the Hatchery Evaluation Reports for the hatcheries and stocks listed in Table 1. A check mark (✓) indicates that the specific life-stage is held at this facility.

This section documents the compliance status of the Gnat Creek Hatchery - Summer Steelhead program. Each performance measure is presented in a table taken from the audit form (Table 2). The compliance status is identified by the following categories:

- **N/A** (not applicable)
- **Yes** (in compliance)
- **?** (unknown; generally due to unavailability of information to determine compliance)
- **No** (not in compliance).

Remedial actions are suggested for performance measures not in compliance. These remedial actions are grouped into categories and listed in Section 4 of this report, where the cost of the required remedial actions is also presented.

**Table 1 Summary Program Information for Gnat Creek Hatchery - Summer Steelhead**

Component	Location of Adult Holding, Spawning, Incubation, and Rearing				
	Oak Springs Hatchery	Gnat Creek Hatchery	Clackamas, Salmon, and Molalla rivers	South Santiam Hatchery	
Adult Collection				4

#23 (cont)	<b>Transportation facilities</b>						
	Does the fish transport unit receive an inspection prior to loading?		4			Discussion	
	Does a pre-loading inspection covering tank water level, pumps or aerators, oxygen injection system settings, displacement gauge, and truck loading/hauling density tables checked and reviewed occur prior to loading fish in the transport unit?		4			Discussion	
	Do hauling criteria include checking the fish 45 minutes to 1 hour after loading?		4			Discussion	
	When fish are active and systems are functioning properly, is the oxygen concentration reduced and maintained at approximately 8 ppm?		4			Discussion	
	Is water temperature in the transportation unit maintained within the 42-48 °F range?		4			Discussion	

**Table 2 Gnat Creek Hatchery - Summer Steelhead Compliance With Performance Measures**

	N/A	Yes	?	No		
Do fish releasing procedures include the following criteria?						
Releasing the fish at the correct release site or into the correct water body.		4			Discussion	
Tempering or the difference between the liberation tank and the target water body should not exceed 10°F.		4			Discussion	
The liberation hose should be angled so that fish gently hit the water. Using a tripod is a method of ensuring the hose will stay at the proper angle.		4			Discussion	

**Table 2 Gnat Creek Hatchery - Summer Steelhead Compliance With Performance Measures**

PM #	Description of Performance Measure	Compliance Status				Basis for Compliance or Non-Compliance	Remedial Action Needed for Compliance
		N/A	Yes	?	No		
#24	<b>Evaluation practices</b>						
	Has the hatchery conducted fishery contribution studies to:					No adult returns to this hatchery	
	Determine the requirements for evaluating and improving management programs?	4				See above	
	Develop guidelines that define the geographical area and identify component stocks (hatchery and/or wild) that comprise the management unit?	4				See above	
	Develop guidelines that define if the proper stocks of fish are currently being used?	4				See above	
	Determine which management units contribute to a specific fishery and the time periods of those contributions?	4				See above	
	Determine the relative contributions of the various management units to a specific fishery over the different time periods?	4				See above

## Remedial Actions

Based on the compliance status for each performance measure, remedial actions were developed. The required remedial actions are organized into five categories. The types of categories range across a spectrum from those actions that are beyond human control, to those that require a change in agency policy or procedures, to those that involve a significant capital cost to put in place. The following are the five types of remedial actions identified under phase 1 of the audit:

### The Five Types of Remedial Actions

Type	Description
1	Non-compliance issues resulting from items beyond human control or Performance Measures not relevant for this hatchery
2	Remedial actions requiring changes in agency policies or procedures
3	Remedial actions requiring changes in monitoring coverage or interval
4	Remedial actions requiring significant capital expenditures
5	Remedial actions that may require significant capital expenditures but are not clearly definable at this time

### Remedial Actions at Gnat Creek Hatchery - Summer Steelhead

This section presents the corrective actions required to bring the Gnat Creek Hatchery - Summer Steelhead program into compliance with IHOT performance measures. The remedial actions suggested here are just that, suggestions developed by the Montgomery Watson Audit Team. For some non-compliance areas, other remedial actions could be proposed. The required remedial actions are cross-referenced to each IHOT performance measure that was not in compliance. Where appropriate, the costs associated with the remedial actions are also presented (Table 3).

The cost estimates presented in this section are based on professional experience from similar projects. In most cases, only a lump-sum figure is presented, and detailed take-off lists have not been prepared. The cost estimates are essentially order of magnitude estimates ( $\pm 40\%$ ).

More importantly, the suggested remedial activities may also present several levels of action. Optional actions have been listed for several problems. These optional actions are desirable for either operational or safety considerations.

**Table 3. Remedial Actions Required at Gnat Creek Hatchery - Summer Steelhead**

Remedial Action Required	Cost	PMS <sup>1</sup>
<b>Type 1</b> - Non-compliance issues resulting from items beyond human control or Performance Measures not relevant for this hatchery Install security alarms	---	6
<b>Type 2</b> - Remedial actions requiring changes in agency policies or procedures Conduct IHOT QA/QC tests for feed preparation Develop specific rearing standards for IHOT Operations Plan  Verify compliance with rearing standards Develop smoltification goal and monitor Increase water supply or reduce production to meet size goal Follow IHOT protocols for disinfection of vehicles interiors and exteriors	--- --- --- --- --- ---	12 18-19, 22a2 19 22a1 22a5 23
<b>Type 3</b> - Remedial actions requiring changes in monitoring coverage or interval Monitor DO and TGP and record Run analysis for water chemistry parameters, turbidity, alkalinity, hardness, nitrite, and contaminants	--- ---	5b 5c-5g
<b>Type 4</b> - Remedial actions requiring significant capital expenditures Install telephone pagers Double screen 4 ponds Construct acclimation ponds in the Clackamas, Sandy and Molalla subbasins. (6)	\$5,000 \$1,200 \$6.0 million	6 10 22b, 22c, 37, 38
<b>Type 5</b> - Remedial actions that may require significant capital expenditures but are not clearly definable at this time None	---	

## Hatchery Contribution to Fisheries, Spawning Grounds, and Hatcheries

This section presents the audit findings for the Gnat Creek Hatchery - Summer Steelhead program contribution of adult fish to fisheries, local fisheries, spawning grounds, and hatcheries. Data is reported by broodyear. A broodyear refers to the adult contribution from the eggs produced from a single group of spawning adults. For some species, this may include fish caught as 2-, 3-, 4-, 5-, and 6-year old fish. Because of the return distribution and data processing delays, the complete adult contribution for a given broodyear may not be available until 4 to 5 years after the fish have been released from the hatchery.

**Table 4. Adult Contribution to Fisheries, Spawning Grounds, and Hatcheries:  
Gnat Creek Hatchery - Summer Steelhead**

Year	Fisheries  (Broodyear)	Spawning Grounds <sup>1</sup>  (Broodyear)	Hatchery <sup>1</sup>  (Broodyear)	Total Combined Contribution  (Broodyear)	Smolt to Adult Survival  (percent)
1983					
1984					

Data obtained from Missing Production Groups Annual Report or from the Regional Mark Information System database.

Total combined adult contribution; presented when it is not possible to subdivide the contribution into fisheries, spawning grounds, and hatchery contributions.

1992					

## Annual Operating Expenditures

The level and detail of annual operating expenditures varies widely depending on hatchery, operating agency, and funding source. When provided, expenditures were presented in terms of personnel costs, operating costs (power, feed, supplies), capital costs, indirect costs charged to the federal government, third-party costs, and other costs. These cost components were summed to determine a total hatchery annual cost. Based on discussion with the hatchery manager, the percent of total hatchery costs allocated to a given program was estimated. The total hatchery costs and the percent of hatchery costs allocated to a given program were used to compute the cost of a given program. Table 5 shows the annual operating expenses for the Gnat Creek Hatchery - Summer Steelhead program. For programs that occur at more than one facility (as shown on Table 1 in Section 3 of this report), the cost breakdown for the component(s) at each facility is presented in separate tables (Tables 5a and 5b).

**Table 5. Annual Operating Expenses: Gnat Creek Hatchery - Summer Steelhead**

Hatchery	1994	1995	1996
1. Gnat Creek Hatchery	\$94,468	\$70,378	\$75,820
2. Oak Springs Hatchery	\$73,835	\$75,863	\$161,661
3.			
4.			
5.			
<b>Total Program Costs</b>	<b>\$168,303</b>	<b>\$146,241</b>	<b>\$237,481</b>

The total expenditures for the Gnat Creek Hatchery are presented in Table 6 by program. The detailed breakdown of program expenditures at this hatchery are presented in separate tables (Tables 6a and 6b).

**Table 6. Annual Operating Expenses - Gnat Creek Hatchery**

<b>Program</b>	<b>1994</b>	<b>1995</b>	<b>1996</b>
